AGENTIC AI

AGENTIC AI AS DIGITAL INFRASTRUCTURE

Sovereign, offline-first deployment for African institutions.

Malawi · SADC · 2026

PILLAR 01

SOVEREIGNTY-BY-DESIGN

Data residency is not a policy add-on. It is hard-coded into the architecture. Local hosting removes reliance on external, high-latency cloud providers, so sensitive information does not leave the institution's own environment.

DESIGN PRINCIPLES

OFFLINE-FIRST	LOCAL INFERENCE	SOVEREIGN
Sync when available	Ollama / llama.cpp	Data stays in-region

PILLAR 02

PRACTICAL IMPLEMENTATION

A 90-day pilot, not a transformation programme. We integrate agentic workflows into existing processes through thin, reversible seams, with an explicit decision gate at day 90: continue, adjust, or stop.

90-DAY PILOT — FOUR PHASES

DAYS 1-14	DAYS 15-45	DAYS 46-75	DAYS 76-90
Seam mapping	Gated build	Shadowed operations	Decision gate

PILLAR 03

ACCOUNTABILITY IN OPERATIONS

Technology debt is treated as a transparent business metric. 90 agents (89 AI, 1 human CEO) run on a canonical seven-tool runtime under a five-tier human-in-the-loop gate. A timeout escalates. It never auto-approves.

APPROVAL TIERS — ESCALATION, NOT AUTO-APPROVAL

TIER 0	TIER 1	TIER 2	TIER 3	TIER 4
Auto	Notify	Single	Dual	CEO only

THE WINDOW

MALAWI IS DRAFTING ITS NATIONAL AI STRATEGY NOW.

We recommend open-weight, locally hosted models and air-gapped inference. Sovereignty and budget are the same design constraint.
