CAMPAIGN REPORT · CONFIDENTIAL · EXECUTIVE

Automated Thought Leadership Pipeline

Sovereignty-by-design for African institutions.

27 October 2026

Executive summary

LightSpeed Holdings Limited™ operationalizes agentic AI in resource-constrained environments by leveraging offline-first, local-model architectures, providing sovereignty-by-design for African institutions. This campaign focuses on positioning LightSpeed as the documented, production-proven practical implementation partner for Malawi's forthcoming National AI Strategy.

Key metrics

Value	Measure	Where it appears in the source
90	**Agents in operation**	Agentic Workforce: 90 agents (89 AI + 1 human CEO) operating across 20 departments under a canonical 7-tool runtime…
20	**Operating departments**	Agentic Workforce: 90 agents (89 AI + 1 human CEO) operating across 20 departments under a canonical 7-tool runtime…
5	**HITL approval tiers**	Governance: 5-tier human-in-the-loop approval system ensures auditability…
4	**CI quality gates**	4-gate CI (ruff, mypy, bandit, pytest).

SECTION 02

The architecture and its controls

Designed for resource-constrained (low-bandwidth/power-intermittent) environments; leverages local LLM inference (Ollama/llama.cpp) to eliminate per-token dependency and bandwidth reliance.

In our submitted commentary on Malawi's forthcoming National AI Strategy, we officially recommend open-weight, locally hosted models for sovereign data protection (aligned with the DPA 2024).

Governance

Five-tier human-in-the-loop approval system ensures auditability; Tier 2 for file edits, Tier 3 for shell execution, Tier 4 for config changes. Timeouts escalate, they never auto-approve.

Timeouts escalate, they never auto-approve.

Traceability

Claims traced to company-registry.yaml, docs/pharos/whitepaper/resource-constrained-deployment-playbook.md, and docs/pharos/research-briefs/2026-10-12-africa-open-source-ecosystem.md.

No superlatives ("first", "only", "leading") are used unless independently corroborated.

SECTION 03

The evidence

Real-world proof. Field-anchored at J&S StopOver Bar (Malawi), demonstrating practical AI-native small business transformation (inventory, sales, procurement).

Positioning

> **Sovereignty.** Data residency is not just policy; it is infrastructure (offline-first local hosting).

> **Practicality.** "90-day pilot" commercial motion; integration seams rather than rip-and-replace.

> **Accountability.** Technology-debt transparency as a business practice.

Source: campaign dossier.md and notebooklm/source-pack.md. Quoted wording is verbatim; nothing is paraphrased into a new claim.

SECTION 04

The ask

Read the playbook and scope a 90-day pilot built on integration seams rather than rip-and-replace.

The gaps

- Details regarding dual-economy pricing structures, localized software licensing models, or tier-based enterprise subscription costs are completely absent.
- Information detailing native integration with local mobile-money payment rails (e.g., automated mobile disbursements for procurement) is unverified in the current context.

> Gaps are reproduced from the campaign source. They are stated, not filled: a number that is not in the source does not appear in this report.
